

This is a list of words to be used along with Equations – Section 6: Solving Linear Systems. The words students input are the words that students need to input within the software, spelled correctly, to complete a section. These words could be reviewed before starting a section and placed on a word wall.

### Section 6: Solving Linear Systems

Words Students Input	Words For Your Word Wall <i>(This is a list of words that students should have prior knowledge of OR they will know by the end of the section)</i>
no solution straight infinite linear system intersection solution more less greater	linear linear system substitution graphing elimination comparison line linear equation slope coordinates y-intercept parallel coincidental lines intersection intersecting lines integer coordinates estimate parallel lines original
