

Google Chrome Compatibility

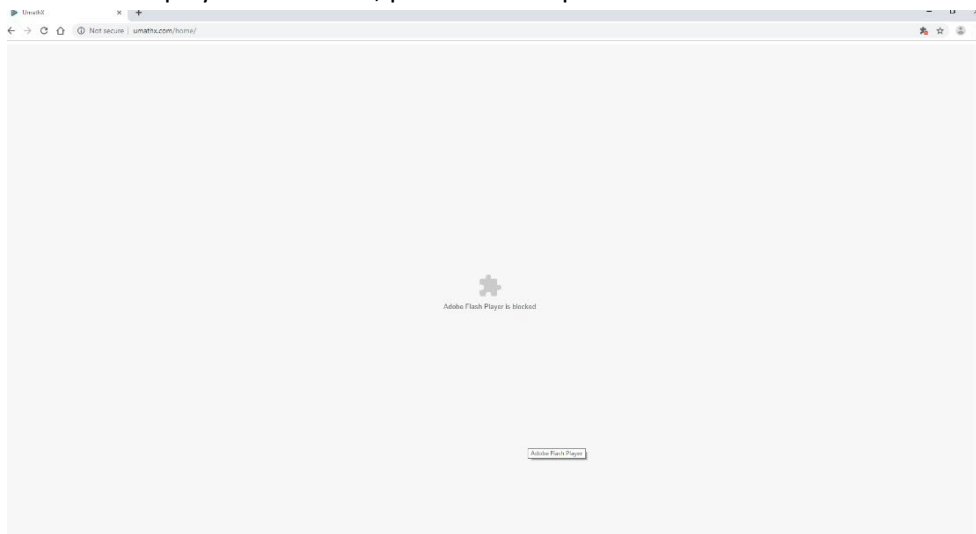

An update to an all javascript version UMath X is coming shortly. The existing version of UMath X includes Flash based content. If you do not have Flash allowed in Chrome, follow the steps listed below.

Instructions:

- 1) Browse to the URL provided to your user, or school district. In our example case, we will use the preview url.

<https://www.umathx.com/preview>

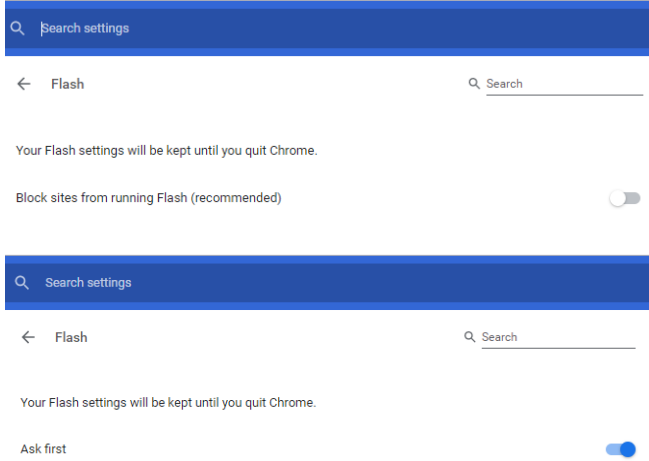

If you see the option to “Click to enable flash player”, jump to step 4, otherwise, if you see “adobe flash player is blocked”, proceed to step 2.

- 2) In the top right of the address bar, you will see a puzzle piece with a red icon. Click it, and choose to “manage” the plugin.

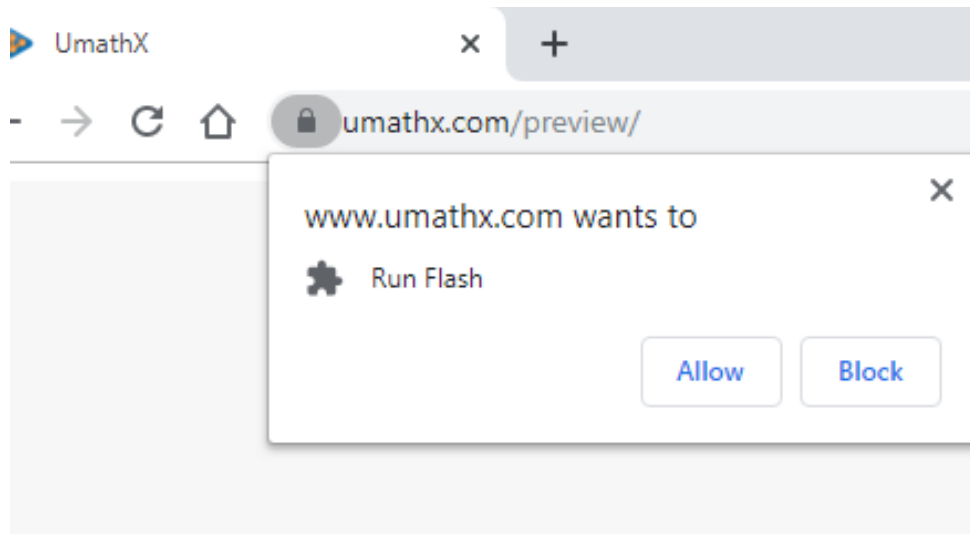

- 3) This will take you to the flash settings page (you can also browse directly to this via Settings->Privacy and Security -> Site Settings -> Flash within Chrome). On the flash settings page, there is a slider with the label “Block sites from running Flash (recommended)”; click this and switch it to “Ask first”.

- 4) Return to your url, and the message will now say, ‘Click to enable Adobe Flash Player’.

- 5) After clicking the icon to enable flash, a new dialog will appear in the upper left, choose 'Allow'.

- 6) UMathX will now work properly, and you will not have to repeat these steps.
